

# Olin College of Engineering

Olin College of Engineering provides an innovative, experiential-based learning environment through technical rigor, creativity, problem solving, collaboration, entrepreneurship and philanthropy. The students pull these disciplines together to accomplish the following during their Olin career:

- Beginning in the first year, students spend 20-60% each semester on hands-on design projects including fabrication of working prototypes which are created using precision techniques and state-of-the-art lab and shop equipment
- Students must present some aspect of their work to external evaluators, industry, faculty and the student body during Olin Exposition (“Expo”); an event held at the end of every semester
- Olin encourages students to develop new products and businesses by providing office space, manufacturing resources, specific recruiting events and more through “The Foundry”; a student-run 'business incubator'. Read about one of our recent startups, [Lilypad Scales](#).
- Seniors complete a challenging, team project (“SCOPE”) for a corporate sponsor. This full-year capstone is the culmination of Olin's project-based curriculum

Here are a few ways you can become more involved with the Olin community:

- Visit the campus during "Expo" when students' projects are on view. It's an opportunity to interact directly with the students. Previous presentations are available at [Expo](#).
- Post your internship, co-op or full time jobs on [JobFinder](#).
- Sign-up for the [Olin Career Fair](#), held in October and February. You may also conduct student information and campus interview sessions at any time of the year.
- Participate in a "SCOPE" project which provides exceptional value to the industry sponsors while providing real-world experience for the students. Visit [SCOPE](#) for more information.
- Participate in the [Olin College Group](#) on LinkedIn where you can offer advice and job leads to alumni and students.

Olin's career center would be happy to partner with you and your company. To coordinate a plan that best suits your company's interests and needs, please contact:
